## Phoenician

Phoenicians scribes were the first to use **symbols** to represent the sounds made in speech rather than to represent ideas or objects, as the Egyptians. This change came about due to the need for a trading society to write messages easily and to keep business records.

1500 B.C.E.

Existing earlier symbols were used, but fewer were needed for ideographic writing. Simplified forms made this first letters in an alphabet easy to learn and use.

Times Roman is the digital type rendition of the original metal font called Times created for the “Times” newspaper in London.

## Roman

G

Just as the Greeks had modified the Phoenician alphabet; the Romans modified the Greek alphabet. They also added two letters for a total of twenty-three.

The Romans developed the majuscule letterforms (Capitals), notable for their exceptional beauty and clarity of form. These letters were often used on monuments, triumphal arches and tombstones.

D

The strictly religious medieval conception of life can be seen in the broken tall arcades of Gothic writing, which mirrored in the architecture of the period.

This hand, a sloping and considerably narrow style, fulfilled the need for a more rapid form of writing.

This cursive was adopted as the official script in the papal chanceries and occupied a place in printing.

It is the precursor for the italic style, named after Italy.

Today it is popular with invitations because it is elegant and suggests a unique hand-made quality. Chancery is an example of a script font.

Old Style fonts are a product of the Renaissance period of European history when aesthetics in architecture and type were copied and revised from the Romans. However, now there were 26 letters and miniscule (lower case) letters in the alphabet. Garamond is an example of Old Style faces. Characteristics include little contrast between the weight of the thick and thin strokes of a letter and has a greater diagonal stress. The brackets and serifs are heavy. Usually the ascender is taller than a capital letter and the x-height can be low compared to later type fonts.

# 1650s

Baskerville and Palatino are examples of Transitional type fonts. Palatino is a popular modern computer counterpart. Transitional type has greater contrast between thick and thin strokes and the serifs are more refined. The stress is less oblique and the x-height is larger than Old Style.

**Modern** type was developed in Italy.

**Bodoni** and Didot are extremely popular Modern typefaces.

1. The difference between the hairline serifs and the bold vertical line weight is extreme.

V Linear serifs are straight, fine, with no brackets. B

u Letters are narrower and the stress is completely vertical.

It has an extremely low x-height making long texts more difficult to read.

Slab serifs are the key characteristic of this style along with the uniform weight in the stroke. The style is associated with “broadsheets” which were the first mass printed posters for the public. Wanted posters in the American west featured this typestyle in the headlines.

**Egyptian**

1 8 0 0 s

The headline letters were so large they were cut from wood  
Courier may be the most famous Egyptian typeface known in modern times because it was used on typewriters and later, on the computers.  
Universities often use an Egyptian capital letter as a logo.

“Sans” means “with-  
out”, in French, and  
“serif” is the name of  
the little foot on classic  
letterforms. The serif is  
gone and there is al-  
most no difference be-  
tween thick and thins  
in stroke weight and no  
stress.

Sans

Futura

1900s

Futura is a classic  
Sans Serif created  
during the Bauhaus  
design period in Ger-  
many that mandat-  
ed that form follows  
function—void of un-  
necessary decorative  
elements. Helvetica is  
the most popular sans  
serif font.
